- Graphics mode 1024 x 768

Program Overview

About Simnet Registry Defrag

Simnet Registry Defrag is an extremely easy-to-use and freeware utility that allows you to defrag windows registry. Over time, with daily use of windows, system's registry becomes fragmented and response times of applications increases.

By using Simnet Registry Defrag periodically, you improve your system's performance, prevent registry corruption, compact and optimize windows registry.

Key Benefits:

- Optimizes your registry by removing gaps and fragments.
- Fixes structural problems in the windows registry.
- Makes system running more stable.

Features:

- Automatic system restore points for safety.
- Automatically product update.
- Smart and easy-to-use interface.
- Minimal installation, low memory and cpu usage.

Defragmenting the Registry

What it does

Registry Defrag fixes structural problems and reduces the total size of the windows registry.

How To Defrag the Registry

1. Launch the Simnet Registry Defrag 2011
2. Click **Analyze Now** button to analyze the level of fragmentation in the registry.
3. When the analysis completes, Registry Defrag will display fragmentation map and the percent of fragmentation in the registry.
4. To start the defragmentation process, click on the **Defrag Now** button.
5. When the defragmentation process has finished, Registry Defrag will restart windows.

Uninstalling Simnet Registry Defrag

To uninstall Simnet Registry Defrag

1. On the Windows taskbar, click **Start > Control Panel**.
2. Click the Programs and Features icon. (Add or Remove Programs)
3. From the Currently installed programs list, choose **Simnet Registry Defrag**, and click Remove
4. Follow the instructions to remove **Simnet Registry Defrag** from your computer.
