Program Overview

About Simnet Registry Repair

Simnet Registry Repair is a powerful tool for windows that allows you to scan and repair registry problems easily. Registry problems are the main reasons of windows system errors which can get your computer slower and less stable.

Registry Repair scans your entire registry for those problems and removes them safely. Using Simnet Registry Repair regularly makes it easy to keep your computer fast, stable and maintain maximum performance.

Key Benefits:

- Scans multiple registry sections at the same time with Advanced Parallel Scan technology.
- Removes corrupt or incorrect registry entries.
- Prevents windows system's freezes and crashes.
- Improves system performance and reduces errors.

Features:

- Advanced Parallel Scan Technology.
- Automatic system restore points for safety.
- Automatically product update.
- Smart and easy-to-use interface.
- Minimal installation, low memory and cpu usage.

Scanning and Fixing Registry Errors

What is does

Registry Repair detects and fixes invalid registry entries in the windows registry.

How To Fix the Registry

1. Launch the Simnet Registry Repair 2011
2. Click **Start Scan Now** button, Registry Repair will start scanning for registry errors on your PC.
3. When the scan completes, Registry Repair will display the number of registry errors found per registry section.
4. To start the fix process, click on the **Fix Errors** button.
5. When the fix process has finished, Registry Repair will display the number of errors fixed.

Defragmenting the Registry

What is does

Registry Defrag fixes structural problems and reduces the total size of the windows registry.

How To Defrag the Registry

1. Launch the Simnet Registry Repair 2011
2. Click on the **Defrag** button from the navigation menu.
3. Click **Analyze Now** button to analyze the level of fragmentation in the registry.
4. When the analysis completes, Registry Defrag will display fragmentation map and the percent of fragmentation in the registry.

5. To start the defragmentation process, click on the **Defrag Now** button.
6. When the defragmentation process has finished, Registry Defrag will restart windows.

Backup & Restore the Registry

What it does

The backup and restore tool allows you to backup the system registry and restore it. Registry Repair takes a **partial repair backup** of your registry automatically, every time before fixing process.

How to Restore the Registry

1. Launch the Simnet Registry Repair 2011
2. Click on the **Backup & Restore** button from the navigation menu.
3. Select the registry backup file you would like to restore from the backup list.
4. Click on the **Restore** button

How to Full Backup the Registry

1. Launch the Simnet Registry Repair 2011
2. Click on the **Backup & Restore** button from the navigation menu.
3. Select the **Full Backups** tab.
4. Click on the **Takes Full Backup** button on the left bottom of the screen.

Uninstalling Simnet Registry Repair

To uninstall Simnet Registry Repair

1. On the Windows taskbar, click **Start > Control Panel**.
2. Click the Programs and Features icon. (Add or Remove Programs)
3. From the Currently installed programs list, choose **Simnet Registry Repair**, and click Remove
4. Follow the instructions to remove **Simnet Registry Repair** from your computer.
